Standard #	Standard Description
<a href="#"><u>HS-PS1</u></a>	
HS-PS1-1	<i>Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms.</i>
HS-PS1-2	<i>Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties.</i>
HS-PS1-3	<i>Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.</i>
HS-PS1-4	<i>Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.</i>
HS-PS1-5	<i>Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.</i>
HS-PS1-6	<i>Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.</i>
HS-PS1-7	<i>Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.</i>
HS-PS1-8	<i>Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.</i>
<a href="#"><u>HS-PS2</u></a>	

HS-PS2-1	<i>Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.</i>
HS-PS2-2	<i>Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system.</i>
HS-PS2-3	<i>Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.</i>
HS-PS2-4	<i>Use mathematical representations of Newton's Law of Gravitation and Coulomb's Law to describe and predict the gravitational and electrostatic forces between objects.</i>

<b><u><a href="#">HS-PS3</a></u></b>

HS-PS3-3	<i>Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.</i>
HS-PS3-4	<i>Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy distribution among the components in the system (second law of thermodynamics).</i>
HS-PS3-5	<i>Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction.</i>
